It was introduced as a successor to the USB 2.0 and SuperSpeed USB protocols. USB 3.0 is also backward compatible with USB 2.0. USB 2.0 is a standard for data interfaces on personal computers that was developed by a group of computer companies in the year 2000. The standard was published by the USB-IF on January 10, 2000. The rise of the Internet and wireless technology has led to a boom in data transfer. This has led to the demand for more reliable, faster and more convenient peripherals. USB 3.0 is the solution to this problem. Unlike the previous USB 2.0 standard, USB 3.0 includes a number of features that make it easier to use.
