Why you should buy it: MZmine Description: The M10-B is a reliable, versatile, and accessible point-of-care testing instrument for professionals and students. Its intuitive software and simple operation make it a valuable tool for research, education, and clinical applications. Analyze mass-spectrometry data in a Java interface After downloading the archive, you can unzip the contents and double-click the.bat file to fire up the application. A command-line window must remain active in the background in order to be able to work with the GUI. When starting a new project, you can setup the parameters and values or import them from external files in TXT or CSV format. A batch mode is available for this purpose and other components, such as gap filling, mass detection, duplicate peak filter, online database search, and formula prediction. Configure peak detection settings and explore visualization modes Peak detection settings can be configured for mass, FTMS shoulder peaks filter, chromatogram builder, GridMass 2D, MS/MS peak list builder, or targeted mode. When it comes to the peak list modes, you can customize options for order peak lists, gap filling, isotopes, filtering, data analysis, export and import, among others. As far as visualization goes, it's possible to opt for TIC/XIC, Spectra, 2D or 3D, MS/MS or neutral loss visualizer. Scatter, histogram and peak intensity plots are put at your disposal too. Complete help documentation is provided. Comprehensive tool for mass-spectrometry data analysis We haven't come across any compatibility issues with the latest Java edition in our tests. MZmine worked smoothly on Windows 10 and left a small footprint on system resources consumption, rendering graphs without any problems. All aspects considered, MZmine comes in handy for advanced users interested in analyzing mass spectrometry data using a Java-based utility. It's free, open source and comes bundled with a rich range of practical features.
