Qytec Domain-IP Locator Product Key Full [Mac/Win] (2022)

[Download](#)

[Download](#)

Qytec Domain-IP Locator is a simple tool designed to quickly locate an IP or a domain name without requiring an online connection. This is one handy piece of software that comes in handy for those who don't have the habit of looking up addresses in a web browser, or simply want to see as much information as possible about either an IP or a domain name. It may seem a bit cluttered at the first look, but the GUI is actually well organized, as it's supposed to group all available options in just a single screen. There are three ways to get more information on an IP: you can perform a simple IP locating, an advanced one or use the domain name, but in all cases the IP or the domain needs to be online. If the simple version requires only the IP, the advanced and the domain modes even let you choose the server to be used in the process. Furthermore, in these two cases Qytec Domain-IP Locator opens a new screen with many more details about the defined IP beside location. There are no settings available, but Qytec Domain-IP Locator lets users add new whois servers for both the IP and the domain utilities, while also providing a dedicated option to save the IP list to TXT. Qytec Domain-IP Locator doesn't slow down the system in any way and relies

on a very fast checking engine, but keep in mind that an Internet connection is required. Overall, Qytec Domain-IP Locator may be a very appealing product for a handful of users, but although it does what it says with minimum effort, it still needs a couple of new features to become a bit more advanced. Qytec Domain-IP Locator Screenshot Qytec Domain-IP Locator is one handy piece of software developed to help you find the location of an IP. Especially aimed at those who want to see as much information as possible about either an IP or a domain name, Qytec Domain-IP Locator comes with a well thought out interface to interact with its users. It may seem a bit cluttered at the first look, but the GUI is actually well-organized, as it's supposed to group all available options in just a single screen. There are three ways to get more information on an IP: you can perform a simple IP locating, an advanced one or use the domain name, but in all cases the IP or the domain needs to be online. If

Qytec Domain-IP Locator Crack Serial Key For PC [March-2022]

Qytec Domain-IP Locator is a simple software that displays the whois information for a specified IP address and domain name, including the domain name server. The IP address location is very easy to find, since it is just a

matter of clicking the right button. Qytec Domain-IP Locator provides you with various information regarding the IP (such as the country, country code, net block, AS number, network AS number, MAC addresses) as well as the domain name (the domain name, the name servers and the TTL). IP or domain can be added to the list and saved for future use. In the advanced mode, the software shows the basic whois information for the IP and domain, plus the domain name server. In this mode, the software allows you to add the IP and the domain to the saved list. The IP addresses can be taken from a text file. At the right-click menu, the saved list can be shown as a simple text, an HTML page or an HTML table. The results can also be printed. If a text file with IP addresses is used, it will be displayed in the form of a list, which can be sorted. The following features are not available: list of IP addresses; search engine for IP address. The text file can be dragged and dropped. Download Qytec Domain-IP Locator Version 1.2 adds support for forward/reverse DNS. Version 1.1 adds support for IPv6. Version 1.0 adds support for use with nameservers. Version 1.0 improves search support. Incredible! Domain-IP Locator (Qytec) is a free easy-to-use utility for anyone wanting to quickly find the IP addresses for a domain name or an IP address. More Info: IPLocator is a free tool that helps you find the IP address

of a domain. It offers a simple and fast way to find the IP address of a domain name, search for a single IP or a range of IPs. IPLocator works automatically and the results are displayed directly in your browser. IPLocator is compatible with various search engines and can search for IP addresses across the web. We offer IP Locator.exe that is lightweight and can be used in any browser. It retrieves information from The Internet Assigned Number Authority (IANA 1d6a3396d6

The purpose of the domain-ip-locator application is to provide a service that will solve the problem of searching for an IP address or a domain name on the Internet. The application is divided into 3 tabs; they are the IP search tab, the domain search tab and the IP tab, which is the most customizable. The IP search tab features a simple search form, which will provide you with a list of the IP addresses located by Qytec, allowing you to search and provide the IP addresses. The second tab is the domain search tab, which allows you to perform a search of the internet for the domain name that matches the search you are interested in. The third tab is the IP tab, where you can find the IP addresses used to host the websites that match the domain name you entered, or simply the IP addresses of the servers that host the domain name you entered. The application has been designed to be simple to use, with a clean and informative interface, although the different tabs of the interface are overlapping each other, so they are not visible at the same time. The application is free to use, however it requires an internet connection to work properly. TidyLs - An Up-to-date List of Technical Websites (301s) in an easy-to-use interface. TidyLs

features an easy-to-use interface that allows you to easily add, modify and remove (expand) your favourite websites. It's a great tool for people who are looking to update their favourite websites with new 301s or for those who want to modify their previously created list. The software is fully functional and provides you with a list of all the sites on the internet that link to your list of websites and is updated every 24 hours. iFile - An easy to use FTP/SFTP client with a friendly GUI. It is a complete suite of tools designed to help you securely transfer files between computers and users. Support FTP and SFTP file transfer protocols and accounts. Bulk file transfer capabilities. iFile can automatically download files from websites (ftp and sftp) or from ftp/sftp accounts (like FTP/SFTP accounts at Internet servers). Extensive logging and reporting capabilities. Help documentation included. A great utility with features that add value to any system. Allstron – A Personal Edition is a system that helps you to search and read

What's New in the?

Quickly, easily and safely identify the location of your host. Qytec Domain-IP Locator is a tool that allows you to locate your own IP (with an extensive database of servers

worldwide) or your domain (with a list of available servers) without entering complex IPs or domain names. Version 4.6.0-1 Developer: Mikael Martinsson Download Qytec Domain-IP Locator from Softpedia. Speeder Boot 3.0 Beta 1 Speeder Boot is a boot manager that allows you to boot to multiple different operating systems. With this program you can boot multiple operating systems from your computer's hard disk. By default, the operating system that you want to boot is the only one that can be booted, but this is easy to change if you want to boot to a different one. Other new features include: - Having a boot.ini file in Windows Vista, which is automatically installed. - A configurable splash screen. - An option to add boot entries to the program before the default entry. - A built-in updater that allows you to update the boot entries whenever you want. - Option to save the program when you exit it. - An easy-to-use interface. - A menu that allows you to start with the default entry or any other entry you want to boot. - A detailed configuration file that allows you to change all boot settings. The manual explains how to run, start, configure and uninstall Speeder Boot. It is recommended that you read the manual before starting Speeder Boot. Speeder Boot allows you to boot multiple different operating systems from your computer's hard disk. With this program you can boot multiple operating systems from

your computer's hard disk. By default, the operating system that you want to boot is the only one that can be booted, but this is easy to change if you want to boot to a different one. Speeder Boot allows you to boot multiple different operating systems from your computer's hard disk. With this program you can boot multiple operating

System Requirements For Qytec Domain-IP Locator:

To run the game, your computer needs at least a Pentium III processor, 1024MB RAM and 128MB video card. The game can be run on slower systems, but it will be unplayable. The game was designed to be run in 1600x1200 resolution (there are a few games in the store that use different resolutions - they are displayed at the correct resolution for your monitor). If you are using Windows 98, Windows ME, Windows 2000 or Windows XP, the game will work, but the screen will be too small to be able to see
