Issues fixed in this version are described in the ChangeLog below. Unstable build, not recommended. This version has a couple of changes in its API: Change 1: Type to a constant in the change from Jacob to Matthias Change 2: Type is now a constant in the.change() method Provide mapping functionality to Raphael for now. This will be included in the next stable release

A: While some of your lines are perfectly valid C code, you should not depend on it, because they are outside the C language standard. You should write your program in C99 conforming code, so you can rely on compiler optimization. Header files should be written in C, and should contain only C declaration and function prototypes. You can also put code like `printf("foobar");` into the.c file, although it's not common. So here we have: `convert.c`: contains a few header files but no code, except `#include convert.h`: contains preprocessor directives `convert.c`: contains C code `convert.h`: contains C declarations so the correct header file to write is `convert.h`, and the correct C file to write is `convert.c`. There is nothing wrong with `#include "convert.h"` in `convert.h`, but the common convention in C is to not include files from the same folder as the header file. There is nothing wrong with the line `void convert (char *fn);` in the header file. The header file (`convert.h`) is only used by the.c file (`convert.c`) and by the C compiler, so it does not matter if the function `convert` is defined in the.h file or in the.c file. The `#include` has no effect on the types, so `convert` has no effect either. Q: Initializing a 3D array In a constructor for a class, I need to initialize a 3D array. I would like to use a dynamic array to reduce memory usage. I tried the following: `int size[2][3] = {{1,2,3}, {4,5,6}};` However, I get the error "Cannot initialize a variable of type 'int[3][2]' with an rvalue of type 'int [2][3]'." I believe this is because I'm trying to initialize an array from a 3D array. Is there any way to achieve this? A: You need a sequence of type `2[3]` and assign values from your C array to it. For example: `int size[2][3] = {1 3e33713323`
