I am using Photoshop to make the website, and everything works great, except for the background, I want the background to be white, so I used "white", but when I put the CSS, it doesn't do anything, I tried to change the opacity, and nothing, I also tried to put "background: white" inside the background-color property. Also, when I put "background: white" it changes it for everything, so the text, the image, etc. I know it's probably something really stupid and I did something wrong, but I'm kinda new to CSS, and I am trying to figure this out. A: The background: is set on the body tag and it will affect all the elements in it. What you need to do is set the background-color on your #header div. Try this: #header{ background: black; background-color: #990000; } Instead of black you can use any other color you want. The effect of a high-fat, low-carbohydrate diet on physical activity. physical activity. This study aimed to test the hypothesis that a low-carbohydrate, high-fat diet would promote increased physical activity. One hundred and forty-five students (females=64; males=81) were asked to follow a low-carbohydrate, high-fat diet for 7 days. They were then asked to recall their physical activity levels, and to complete three validated measures of physical activity. No significant effect of diet on physical activity was found. However, a significant positive correlation was found between a1d647c40b

Aisling & Briac: A Powerful Experiment In Chemistry By Samuel Anderson Hailing from the bluest of bluebells, Aisling & Briac are raw and powerful, the perfect formula for encapsulating a bold, undiluted experimental chemistry. With their debut album, A Wild Adventure, out now, we caught up with the duo as they put pen to paper on their views on the album, playing the Chemistry tour and more. You've just released your debut album, A Wild Adventure. What were some of the main challenges in bringing the album to life?

Aisling: We are constantly learning and we have never really felt confident enough to be our own person, so when it came to creating our own chemistry we didn't know what to do or where to start. To make it easier for us to work together we chose to collaborate with producer Matt Hawes, who was a huge help and helped guide us through the process.

Briac: When it came to the lyrics and ideas we needed a creative mind who was willing to take risks and give it a go. Matt was willing to take a gamble on us, so we were able to create something that is real and organic. It was a trial and error process, but we were both confident enough to take risks and push the boundaries of what we felt was possible. You're touring the Chemistry album right now. How does it feel to be playing your songs for real audiences?

Aisling: It's been so wonderful to see the Chemistry album work in a live setting. We are in awe of the response we have had, but there's a lot more work to be done, so we have to stay focused and never take it for granted.

Briac: It's an amazing feeling and we are so grateful that we have a chance to share our chemistry with people in a live setting. It's important to us that we give everything we have on stage, so that's what we are doing and we can't wait for you to see it! You
