Random_picker_rare_infrequent: picks a color from the list of rare colors that is only picked up by less frequent colors in the list (corresponds to rare_random_rare_infrequent). Selection_copy: enables you to copy the currently used selection color to the clipboard. The option is available in the rare colors and the rare colors rare variants. This interface has been tested on Mac OS X and Windows XP. Bright Solar is a novel, exclusive theme. A combination of beautiful animal colors and blooming flowers brings in a number of colorful effects. The application is designed in a way to provide you with quick and simple access to several tools, so you can modify the appearance and colors of the desktop. A variety of features include: Check which windows are running Add/remove items in the taskbar Apply different colors to the desktop/window frame/toolbar Generate a custom icon (the icon that will be displayed in the system tray) Support for multiple users Change the default desktop, taskbar, desktop icons, and more. The ability to drag and drop large files or folders onto a desktop entry can be used to automate the creation of numerous different folders, each on its own desktop, or inside the one you are currently on, and then to make the user-specific (or system-wide) shortcuts inside them. Windows 7 had a number of issues when it came to large files -- they didn't support drag and drop and behaved strangely in Explorer's pathbar when there were many files involved. Windows 7 has improved its support

It's an instant gallery viewer, made for the benefit of everyone who enjoys the nudist (naked) lifestyle. It's a fast, convenient tool for searching through pictures. It uses frames to organize pictures. It can search through pictures by date. It can compare dates. It can sort pictures by size. It's quick. Help yourself with this totally free, totally awesome, totally funny, totally cool and totally powerful program which allows you to save your favorite photos from the internet and put them up on the web. Also, it lets you create your own collections of photos with captions (and links to your favorite web sites) and share them with anyone. When you launch a photo album, instead of every image opening in the same window, you can now open each one in its own window (or tab). The album still operates like a traditional HTML page, and will be searchable, viewable from multiple places and will even be cached if you use IE 4.0. You can even create multiple albums that open in the same tab, with a cascading animation. A photo album is a page that displays an organized list of photos on the screen. Simply drag and drop the photos you want to be displayed into the page 6a5afdab4c

The Color dialog window provides a color chart for all currently available selection colors available in Windows. The tool also allows you to choose from the various standard selection color palettes and to define your own selection colors. Color Viewer: Color Viewer allows you to define any color by inspecting its HSV (hue, saturation, value) values. The different target colors can be set to a predefined value by adding a modifier to the HSV value. This is a simple way for setting up arbitrary selection color shades. Windows Color Picker: Color Picker enables you to use the standard selection color palettes available in Windows. Select a specific color from the preview window, copy it to the clipboard or paste it into your document. You can also export selected colors as an.avi image, a.bmp, a.cur or a.gif file. Color Picker Plus: The options of Color Picker Plus can be found in the Color Picker. The program runs as a stand-alone Windows application and as a plug-in to Windows Explorer. This enables you to activate the tool right from the Windows Explorer context menu and to configure it according to your needs. Color Organizer: This tool allows you to modify your global color settings with just a few mouse clicks. These settings are then applied to any app that is currently running on the system. Color Organizer provides you with the ability to create, delete and modify the global color settings. For example you can change the current selection color, the current text color, the system colors, the colors of the system drives, or the default colors of any application that is currently running on the system. Color Organizer also allows you to delete all current color settings. Color Organizer Plus: Color Organizer Plus provides the same user interface and options as the Color Organizer tool, except that you can associate certain color settings with application specific settings. For example you can change the color of the global status bar or of any dialog box. With this approach you can also change the system-wide color values without having to restart the system. Color Organizer Plus allows you to create, delete and modify application specific color settings. Color Organizer Plus also provides the ability to modify the system-wide settings of all applications that are currently running on the system. Color Organizer Free: Color Organizer Free works the same as the full version of Color Organizer Plus except that it is much
