PCB Design Committee (1-10) IPC. 5.1.1 The PP collection should contain the information necessary for the development of technological processes and for the development of design documentation (CD). 5-10 normative references should be given together with the number and year of publication of the collection. If there are no references to normative documents in the collection, they are additionally marked at the end of the reference text. If the normative document is not marked, then it should be indicated before the collection number, or after the number and year of publication. When using regulatory documents, the number (index) of the source of information is given. It is allowed to use a direct reference to the regulatory body if it is indicated, for example, in GOST 19.120-85 "Test methods for static static pressure at 40 GPa". In the absence of a reference to GOST 19-120-84, as an alternative to referencing it, GOST 19120-2002 "Method of testing with static static head at 40 and 60 GPa and other test facilities" can be used. In this case, a reference to GOST should be indicated immediately before the number (index) of the source. It is recommended to use an end-to-end identifier, for example GOST 1.01-08-2013-09.002-02.071-01.072-01 or equivalents. The names of regulatory documents are given in units. rev., p. 428-429 5(37). Methodology for conducting periodic tests for the strength and rigidity of parts and assemblies of electronic equipment in static static and other types pressure under loading conditions in time at room temperature 5.(38). Methodological instructions for conducting periodic static tests for reliability and 5.3(38).1. Collection "Metrology, standardization and certification", issue 2, Moscow - 2008. GOST 14166-96. Electronic devices for information protection. Methods for measuring and processing signals. Collections of provisions, instructions, instructions GOST 28574-89. Switching and information exchange systems. Terms and Definitions GOST R 50939-96 Production technologies and quality control of electronic components. Nomenclature and name of materials, shapes and sizes GOST 30561.2-99 Radio circuits and signals. Frequency analysis. Requirements for continuity and accuracy GOST 40709-96 Instruments for measuring, testing and controlling geometric parameters. Test parameters and functionality GOST 4.1107-8
