Learn Advanced Korean Pimsleur's leading language learning system. Total package 11.09MB. Choose option 2, Korean 1 (Korean Language 1

!Q: Match leading and trailing whitespace in a Regex I'm trying to write a regex to match the trailing whitespace (that is, whitespace in a string that follows a word) but not the leading one. I'm using a regular expression that is supposed to match "`\d*\W+`" to match the spaces that come after word-like things. This works fine, but it also matches the

leading whitespace in the first column. This is because it tries to match a blank because of the "" and \W are both "blank". Here's an example string: This is a test. The last word, test, has 3 spaces after it, which I want to match: the second and third space (which have to be ignored), but the first space should not. I've tried using "^\s*" and "\s*\$" to match spaces that come before (and after, respectively) my word, but they are still incorrect. I need the regex to include the spaces after my word in the capture groups. A: "\s*\W+" will never match because, as the name implies, \W matches a non-word character. Don't try to use the "trick" of "" and "\W" to match spaces; use \s. Regarding your other comment: "/^\s*\

Pimsleur Language Pack

Language Pack. Choose the right Language Learning Software using real-time, up-to-date product. Pimsleur Unlimited is a language

learning software.1. Field of the Invention The present invention relates to a mobile terminal

and a method for controlling the same, and more particularly, to a mobile terminal and a method for controlling the same, in which a

user's voice command input to a mobile terminal is converted into a driving force

according to the intention of the user, and for stably performing a driving operation, a conversational mode according to the intention of the user is automatically changed to a driving mode according to the intention of the user. 2.

Description of the Related Art Recently, mobile terminals such as smart phones provide functions as a personal digital assistant (PDA), a Personal Communications System (PCS), and the like. Therefore, the mobile terminal provides

various functions such as text input or reception of a call, a motion picture, music, a message, and the like according to user's convenience.

Such a mobile terminal is recognized as an important development tool in our daily life. The mobile terminal may provide various additional services related to the above functions. In

particular, the mobile terminal provides information on locations of friends or a nearby restaurant or the like according to the user's request. Accordingly, a user can easily use a variety of useful functions of the mobile terminal in real life. In order to realize the above

functions, it is very important for the mobile terminal to be stably driven. However, since conventional mobile terminals are not capable of fully realizing a user's intention, a user should

be inconvenienced. For example, a mobile terminal having a communication function may fail to receive a call, or fail to process a motion picture. However, in the conventional mobile terminal, it is only possible to select one user's call in real time. That is, when a user of another mobile terminal
