Note You can create layer groups out of the currently open images or layers and save them as a single file. For example, say that you have open some images and a selection tool that you want to save as a layer group. Instead of saving each image, do the following: 1. Choose File→Save As. 2. In the Save As dialog box, navigate to the folder where you want the file to be saved and select the group format (see Figure 23-1, or use File→Save As to save the selection.) I chose the Web format to save the selection as a single file.

The Eraser lets you cut out unwanted areas from a photo or other image. The Gradient tool lets you smooth out the edges of an image, making it appear more uniform and professional. The Pen Tool lets you draw lines, curves and shapes on the canvas. The Pen can be moved, rotated and zoomed with the mouse. When you click the Pen Tool icon in the Toolbar, a cursor appears and you can draw lines with the Pen. The lines you draw are presented as a thick line and appear in different colors. You can also pick which Pen Tool Color to use to draw each line. The Paths tool is a WYSIWYG-style drawing system to create paths, using line and shape elements. The Spot Healing Brush tool is useful for removing unwanted spots, duplicates or hairs, or doing paint-overs. The Magic Wand tool allows you to select all areas of an image that match a certain color, and you can even change the color of the selected area. The Selection Brush tool lets you make a selection of an area on a photo. This selection will let you mask an area of a photo and paint over it. The Magic Wand is very similar to the Spot Healing Brush, except that instead of being used on areas that are parts of an image that are just slightly out of place, it can also be used to select entire image areas that are just slightly out of place. It is also used in the same manner as the Selection Brush tool, but it can also be used to fill in specific colors that are in the image.
