Improving Productivity

Powered tuggers are synonymous with seamless material handling, which is why it is important to employ them at facilities where large or heavy cargo needs to be handled. Due to their outstanding design, they are considered the best alternative to the forklift and overhead crane.

Rather than constant stop and start of waiting for a trained forklift operator, a tug can be easily connected and go within minutes. Operating and handling heavy cargo doesn't require hours of training. Rather, it works excellently, which helps to reduce manpower and improves productivity altogether.

Minimal Requirement of Manual Handling

Workplace accidents are the worst nightmare of the employers. When more workers are employed to carry out the same task, accidents become inevitable. In such conditions, it is best to employ these 3000 lb powered tuggers, which are designed to work in challenging working conditions while tugging cargo seamlessly. Due to the outstanding design, these are best to be used in hospitals, factories, aviation and manufacturing fields for different cargo traction requirements.

Helps to Use Every Inch of the Available Space

Since 3000 lb powered tuggers are integrated with smart control handles, they are best used in various tight spaces, making every inch of the space usable. Most of the time, handling heavy cargo becomes challenging in tight spaces, but these electric tuggers are perfectly designed to be operated along with super manoeuvrability that keeps the workplace completely safe. These material handling equipment have small turning circles and can navigate around the corners safely and easily.

Cost-Effective Material Handling Equipment

There are several materials handling equipment available on the market. All of them come with different specifications and costs.
